Note: For dates subsequent to the Census of 30th June, 1954, the estimated population of South Australia represents the population ascertained at the Census plus natural increase and recorded net migration since the Census. As complete records of interstate migration are not available, the estimated population so derived is approximate and is subject to revision when the actual population is ascertained as a result of the Census of 30th June, 1961.

Estimates for Statistical Divisions are based on the State Estimates described above adjusted at the end of each quarter principally in accordance with the net increase in the number of dwellings in the various local government areas.

No. 102—Consumer Price Index: Adelaide

(Base of Each Group : 1952-53 = 100)

For current statistical purposes the Consumer Price Index replaces both the "C" Series Retail Price Index and the Interim Retail Price Index. The list of items is more extensive than formerly and hence the new Index measures more accurately quarterly variations in retail prices of goods and services representing a high proportion of the expenditure of wage earner households.
